General syllabus for third-cycle courses and study programmes in

MECHANICAL ENGINEERING

Maskinteknik

This syllabus was approved on 20 June 2007 (reg. no. CF 62-269/2007)\(^1\). It was last approved on 12 September 2019 (2019/04607)\(^2,3\).

By virtue of the Higher Education Ordinance, Chapter 6, Section 26 (1993:100), Örebro University prescribes the following.

1 Subject description

Mechanical engineering is an interdisciplinary branch of knowledge concerned with the fundamentals of technology and its application in products and industrial systems. The subject is diverse and covers aspects ranging from basic studies of material and methods to computational processes, optimisation, and engineering methods to facilitate design of products and systems.

At Örebro University, focus is on mechanics and materials engineering, as well as on digitalised product and production development with applications in products and industrial systems. Both the research pursued at the department and the doctoral study programme have a particular focus on simulation, control and optimisation of complex products and industrial systems, and entail:

- development, verification and validation of virtual models for product properties and production system properties,
- optimisation and control of production systems and manufacturing processes, as well as
- development of industrial service processes.

Research is mainly conducted in collaboration with industry partners but also in collaboration with other universities, institutes and institutes of technology.

2 Outcomes

The intended learning outcomes for the award of the degree, the qualitative targets, are evident from annex 1 to this syllabus. The different components of the third-cycle study programme shall together equip the doctoral student to meet all

\(^2\) Faculty Board of Business, Science and Engineering

\(^3\) The English translation of this general syllabus was last amended on 10 October 2019.
intended learning outcomes. The intended learning outcomes are referred to in more detail in the degree requirements in sections 5 and 6.

3 Admission to the programme – entry requirements and selection etc.

Provisions on entry requirements and selection can be found in annex 2 to this syllabus. For information on admission in other respects, see the admission regulations for Örebro University.

4 Programme organisation – general information

There are two types of third-cycle, or doctoral, study programmes – one concluding with the doctoral degree (240 credits, corresponding to four years of full-time study) and one concluding with the licentiate degree (120 credits, corresponding to two years of full-time study).

The programmes mainly consist of courses and the writing of a doctoral or licentiate thesis. The programme components are assessed by means of course examination and the public defence of the thesis respectively. The doctoral student is expected to take an active part in seminars and other auxiliary components during their period of study. The student is further recommended to take advantage of the opportunities offered to attend guest lectures etc. at the university, and to attend and contribute to national and international conferences.

For each doctoral student, a minimum of two supervisors will be appointed, supporting the student during their studies. One of them will be nominated principal supervisor. The detailed organisation of the programme shall be determined in an individual study plan.

In addition to the requirements laid down in this general syllabus, there may be special requirements for the doctoral student’s programme, such as courses that are compulsory within the framework of a research school, which must be specified in the individual study plan. The credit distribution between courses/examinations and thesis should nevertheless be in accordance with the programme organisation as laid down in this general syllabus.

4 Under the new higher education system in Sweden, and in accordance with the terminology recommended by the Swedish Council for Higher Education, courses and study programmes at the doctoral level are referred to as third-cycle courses and study programmes. In this document, the terms doctoral and third-cycle are used interchangeably as prefixes to terms related to studies at the doctoral level and they should therefore be considered synonymous [translator’s comment].

5 Higher Education Ordinance, Chapter 6, Sections 4, 5, 28 and 29 and local guidelines on the organisation of third-cycle courses and study programmes.

6 The Higher Education Ordinance stipulation that at least two supervisors be appointed for each doctoral student does not apply to doctoral students who commenced their studies before 1 July 2007. Instead, the older provision of at least one supervisor applies (point 18, transitional provisions of SFS 2006:1053).
| Licentiate degree | 12.5 | 17.5-27.5 | 80-90 | 120 |
5 Degree requirements for the Degree of Doctor, 240 credits

For the Degree of Doctor, the doctoral student must
- have received a passing grade in the examinations\(^7\) of the 60-80 credits generated by the courses listed below,
- have received a passing grade on a scholarly dissertation (doctoral thesis) corresponding to 160-180 credits. The thesis is to be defended orally at a public defence event\(^8\).

Compulsory courses, total of 18 credits
Research and Thesis Planning in Science and Technology, 7.5 credits
The course and examination shall refer to outcomes D2, D3, D4, D7, D9 and D10, annex 1

Introduction to the philosophy of science, 2.5 credits
The course and examination shall refer to outcomes D9 and D10, annex 1

Research Ethics in Science and Technology, 2.5 credits
The course and examination shall refer to outcomes D9, annex 1

Elective courses, total of 47.5-67.5 credits
Which course/courses a doctoral student shall take is determined based on an assessment of what courses will enable them to meet the intended learning outcomes. The doctoral student plans, in consultation with the supervisor, which courses should be part of their programme. The selection is then laid down in the individual study plan.

Elective courses shall refer to outcomes D1, D2, D3, D4, D7 and D10, annex 1.

Doctoral thesis and public defence, 160-180 credits
At the public defence event, the assessment of the doctoral thesis and the public defence thereof shall refer to all intended learning outcomes specified for the award of the doctoral degree, annex 1.

6 Degree requirements for the Degree of Licentiate, 120 credits

The licentiate degree is the degree awarded to those who have been admitted to and successfully completed a licentiate programme. Students who have been admitted to the programme concluding with the doctoral degree have the right to apply for the award of a licentiate degree, as a half-way degree\(^9\). The degree requirements in this section apply to the licentiate degree both as a final and as a half-way degree.

For the licentiate degree, the doctoral student must
- have received a passing grade in the examinations\(^10\) of the 30-40 credits generated by the courses listed below,
- have received a passing grade on a scholarly paper (licentiate thesis) corresponding to 80-90 credits\(^11\).

\(^7\) Higher Education Ordinance, Chapter 6, Section 32
\(^8\) Higher Education Ordinance, Chapter 6, Sections 5 and 33
\(^9\) Örebro University’s local regulations on qualifications
\(^10\) Higher Education Ordinance, Chapter 6, Section 32
\(^11\) Higher Education Ordinance, Chapter 6, Section 5

(Mechanical Engineering)
For courses and course blocks that are identical for the licentiate and doctoral degrees, please see outcomes and descriptions in section 5. For any other courses and course blocks, see below\textsuperscript{12}.

**Compulsory courses, total of 12.5 credits**
Research and thesis planning in science and technology, 7.5 credits

Introduction to the philosophy of science, 2.5 credits

Research Ethics in Science and Technology, 2.5 credits

**Elective courses, total of 17.5-27.5 credits**
Which course/courses a doctoral student shall take is determined based on an assessment of what courses will enable them to meet the intended learning outcomes. The doctoral student plans, in consultation with the supervisor, which courses should be part of their programme. The selection is then laid down in the individual study plan.

Block I: Complementary and specialised courses, 10-20 credits

**Licentiate thesis, 80-90 credits**
On the examination of the licentiate thesis, the assessment shall refer to all intended learning outcomes specified for the award of the licentiate degree, annex 1.

7 **Further information**

Further information about provisions for doctoral study programmes can be found on the university website. Documents there include the admissions regulations for Örebro University and other information on national and local regulations.

---

**Entry-into-force and transitional provisions**

This general syllabus shall be in effect from 1 July 2007.

*Doctoral students who have commenced their studies before 1 July 2007*

Doctoral students who have commenced their studies on the programme before 1 July 2007 shall continue their studies according to the new provisions for third-cycle courses and study programmes. As a principal rule, the doctoral students will be awarded their qualification from the new programme\textsuperscript{13}.

These doctoral students have however the right, should they require, to complete their studies and obtain their qualification pursuant to the earlier provisions for

\textsuperscript{12} Since the licentiate degree may constitute a half-way degree on the road to a doctoral degree, the courses intended for a licentiate degree should, in conformity with the courses intended for a doctoral degree, be linked to the outcomes for the doctoral degree, see further in the guidelines for general syllabuses for third-cycle courses and study programmes.

\textsuperscript{13} Point 1, transitional provisions for SFS 2006:1053
third-cycle courses and study programmes. This right exists until, but no later than, the end of June 2015 (point 5, transitional provisions of SFS 2006:1053).

Amendments approved by the vice-chancellor on 19 October 2010 shall take effect on 1 January 2011. These amendments are a result of amendments to the Higher Education Ordinance, but they do not lead to any factual alterations in the general syllabus.

Amendments to the general syllabus approved on 14 March 2014 shall take effect on 1 April 2014. These amendments include an update of the subject description (section 1) and changes to the courses required for the award of the degree; in terms of the total number of credits generated by these courses and how they are distributed between compulsory and elective courses (section 4, 5 and 6). The amendments also refer to an adaptation of the general syllabus to the new template, through which, among other things, the different components of the programme are more clearly linked to the different intended learning outcomes (primarily sections 5 and 6).

Doctoral students admitted to the programme prior to 1 October 2013 shall complete their studies in accordance with the previous degree requirements. If requested by a doctoral student and it is deemed appropriate, provisions may be made in the individual study plan for the student to complete their studies in accordance with the new degree requirements.

Amendments to the general syllabus approved on 12 September shall take effect on 26 September 2019. These amendments include an update of the subject description (section 1) and changes to the courses required for the award of the degree; in terms of the total number of credits generated by these courses and the way they are distributed between compulsory and elective courses (sections 4, 5 and 6).

Doctoral students admitted to the programme prior to 26 September 2019 shall complete their studies in accordance with the previous degree requirements. If requested by a doctoral student and it is deemed appropriate, provisions may be made in the individual study plan for the student to complete their studies in accordance with the new degree requirements.
Outcomes for the DEGREE OF DOCTOR

For the Degree of Doctor, the third-cycle student shall

14 Extract from the Qualifications ordinance, annex 2, Higher Education Ordinance (1993:100)
Admission to doctoral studies – entry requirements

1 Admission requirements – Higher Education Ordinance

The Higher Education Ordinance stipulates that the number of doctoral students that may be admitted by the university may not exceed the number that can be offered supervision and otherwise acceptable conditions for study and whose studies are funded pursuant to the provisions in the Higher Education Ordinance 15.

The requirements for admission to third-cycle courses and study programmes are that the applicant
1. meets the general and specific entry requirements that the university may have laid down, and
2. is considered in other respects to have the ability required to benefit from the course or study programme 16.

2 Entry requirements

2.1 General entry requirements

A person meets the general entry requirements for third-cycle courses and study programmes if they
1. have been awarded a second-cycle qualification,
2. have satisfied the requirements for courses comprising at least 240 credits of which at least 60 credits were awarded in the second-cycle, or
3. have acquired substantially equivalent knowledge in some other way in Sweden or abroad.

The higher education institution may permit an exemption from the general entry requirements for an individual applicant, if there are special grounds 17.

Transitional provisions

a) A person with credits or qualifications from undergraduate programmes under the previous higher education system corresponding to the entry requirements above will also be eligible 18. Exemptions from the entry requirements may be made also in these cases, if there are special grounds.

b) A person who meets the general entry requirements for doctoral study programmes (120 credits from undergraduate programmes or corresponding knowledge 19), before 1 July 2007 will also be considered to meet the general entry requirements for third-cycle courses and study programmes after that, however, until no later than the end of June 2015 20. Exemptions from this provision are not permitted.

15 Higher Education Ordinance, Chapter 7, Section 34
16 Higher Education Ordinance, Chapter 7, Section 35
17 Higher Education Ordinance, Chapter 7, Section 39
18 Point 10, transitional provisions for SFS 2006:1053
19 A person who has completed an undergraduate programme of at least 120 credits, or in some other way, in Sweden or abroad, has acquired substantially corresponding knowledge
20 Point 11, transitional provisions for SFS 2006:1053
2.2 Specific entry requirements

A person meets the specific entry requirements for doctoral courses and study programmes in the subject if they have obtained a Degree of Master of Science in Engineering or a Degree of Master (60 credits) from a programme within the main field of study or a related main field of study. A person who has acquired substantially corresponding knowledge, in Sweden or abroad, also meets the specific entry requirements.

Transitional provisions
A person with credits or qualifications from undergraduate programmes under the previous higher education system corresponding to the entry requirements in the previous paragraph will also be eligible\(^\text{21}\).

2.3 Ability in other respects to benefit from the course or study programme

The assessment whether the applicant has such ability in other respects to benefit from the programme shall be made based on prior courses and programmes taken by the applicant, on other previous activities, as well as on the essays and other independent projects of a scholarly nature that have been submitted by the applicant (compare assessment criteria in accordance with the university’s regulations on the selection of doctoral students below).

3 Selection from among the applicants

In selecting between applicants, their ability to benefit from the programme shall be taken into account. The higher education institution determines which assessment criteria shall be used in determining the ability to benefit from the programme.

However, the fact that an applicant is considered able to transfer credits from prior courses and study programmes or for professional or vocational experience may not alone give the applicant priority over other applicants\(^\text{22}\).

Assessment criteria for selection\(^\text{23}\)

The criteria A - B aim at facilitating an examination of the applicant’s ability to benefit from the programme. They should therefore be relevant to the applicant’s ability to later achieve the learning outcomes of the programme. The outcomes are described in annex 1 to this general syllabus.

\(^{21}\) Point 10, transitional provisions for SFS 2006:1053
\(^{22}\) Higher Education Ordinance, Chapter 7, Section 41
\(^{23}\) Local regulations on the selection of doctoral students to third-cycle courses and study programmes etc.
A Courses, study programmes and other previous activities – formal qualifications
The assessment is based on submitted certificates and transcripts as well as on degree
certificates and/or course certificates.

Completed courses and study programmes and experience contributing to the
applicant’s ability to successfully benefit from the programme applied for are
considered an additional qualification.

- Courses and study programmes
Special emphasis is given to the scope, depth and grades of the applicant’s prior
courses and study programmes within the subject area applied for, particularly the
grades on written independent projects.

Emphasis is also given to the scope, depth and grades of prior courses and study
programmes within other fields of great relevance to the subject area applied for.

- Other previous activities
Special emphasis is given to long and independent professional and/or vocational
experience of great relevance to the subject area applied for.

B Capability – demonstrated knowledge, competence and skills
The assessment is based on a consideration of the applicant’s submitted essays and
other written independent projects of a scholarly nature. For those applicants who at
this stage are considered to be most qualified, and if it is deemed necessary, references
will be taken and interviews will be carried out.

It is considered an additional qualification if the applicant demonstrates such
knowledge, competence and skills that contribute to them being successfully able to
benefit from the programme applied for. These are for example
- sound theoretical, analytic and methodological knowledge;
- sound ability to discuss, in writing and in speech, issues and conclusions;
- intellectual independence; and
- sound ability to carry out advanced tasks within given time frames.

Special emphasis is given to the applicant’s ability to
- identify and formulate realistic and productive research problems;
- integrate knowledge and experience and apply these in ways and in contexts where
  they have not previously been used; and
- conduct a dialogue characterised by independence as well as by an ability to
  cooperate.

C Weighing up qualifications
The fact that an applicant is considered able to transfer credits from prior courses and
study programmes or for professional or vocational experience may not alone give the
applicant priority over other applicants (Higher Education Ordinance, Chapter 7,
Section 41).

When weighing up the assessment criteria A and B, the greatest emphasis is placed on
criteria B, Capability.
D Gender equality

If, followed from the above, applicants are found to have equal qualifications, preference will be given to applicants of the sex that is underrepresented among the doctoral students within the subject area. The underrepresented sex here refers to if and when the share of either female or male students enrolled on the subject area’s third-cycle study programme amounts to less than 40 per cent.

24 Higher Education Act (SFS 1992:1434), Chapter 1, Section 5, second paragraph and other provisions
