Survey organisation is a big challenge when it is important to get information on several aspects of business and society development – when data are not collected by respected and recognised institutions, like Central Statistical Bureaus or National bank where usually are involved legal regulations for respective data collection and it is good that now a lot of those collected data sets are available for researchers. But often there are needs of municipalities (Jekabsone, Sloka, 2015; Buligina, et al, 2014), planning regions (Ozoliņa, Sloka, 2019), employer's organisations (Buligina, Sloka, 2019; Buligina, et al, 2016; Buligina, Sloka, 2016) and businesses (Sloka, et al, 2016) where it is important to get reasonable information on situation analysis and further decision – making. Aim of the paper – analyse advantages and disadvantages of social partner involvements of survey organisations. Research methods used: scientific publications analysis, evaluations of experience of different partner involvement in survey organisation. Research findings: co-operation with social partners is challenging and useful for information sources.
